

Inspiring Excellence

Course Code:	CSE111
Course Title:	Programming Language II
Classwork No:	04
Topic:	OOP (Instance method and overloading)
Number of Tasks:	5

Task 1

Design the **Student** class in such a way so that the following code provides the expected output.

Hint:

- Write the constructor with appropriate default value for arguments.
- Write the dailyEffort() method with appropriate arguments.
- Write the printDetails() method. You can follow the printing suggestions below:
 - ☐ If hour ≤ 2 print 'Suggestion: Should give more effort!'
 - ☐ Else if hour ≤ 4 print 'Suggestion: Keep up the good work!'
 - ☐ Else print 'Suggestion: Excellent! Now motivate others.'

[You are not allowed to change the code below]

Driver Code	Output
<pre># Write your code here. harry = Student('Harry Potter', 123) harry.dailyEffort(3) harry.printDetails() print('=====') john = Student("John Wick", 456, "BBA") john.dailyEffort(2) john.printDetails() print('=====') naruto = Student("Naruto Uzumaki", 777, "Ninja") naruto.dailyEffort(6) naruto.printDetails()</pre>	<pre>Name: Harry Potter ID: 123 Department: CSE Daily Effort: 3 hour(s) Suggestion: Keep up the good work! ===== Name: John Wick ID: 456 Department: BBA Daily Effort: 2 hour(s) Suggestion: Should give more effort! ===== Name: Naruto Uzumaki ID: 777 Department: Ninja Daily Effort: 6 hour(s) Suggestion: Excellent! Now motivate others.</pre>

Task 2

Write the **Farmer** class with the required constructor, methods to get the following output.

Driver Code	Output
<pre>f1 = Farmer() print("-----") f1.addCrops('Rice', "Jute", "Cinnamon") print("-----") f1.addFishes() print("-----") f1.addCrops('Mustard') print("-----") f1.showGoods() print("-----") f2 = Farmer("Korim Mia") print("-----") f2.addFishes('Pangash', 'Magur') print("-----") f2.addCrops("Wheat", "Potato") print("-----") f2.addFishes("Koi", "Tuna", "Sardine") print("-----") f2.showGoods() print("-----") f3 = Farmer(2865127000) print("-----") f3.addCrops() print("-----") f3.addFishes("Katla") print("-----") f3.showGoods() print("-----")</pre>	<pre>Welcome to your farm! ----- 3 crop(s) added. ----- No fish added. ----- 1 crop(s) added. ----- You have 4 crop(s): Rice,Jute,Cinnamon,Mustard You don't have any fish(s). ----- Welcome to your farm, Korim Mia! ----- 2 fish(s) added. ----- 2 crop(s) added. ----- 3 fish(s) added. ----- You have 2 crop(s): Wheat,Potato You have 5 fish(s): Pangash,Magur,Koi,Tuna,Sardine ----- Welcome to your farm. Your farm ID is 2865127000! ----- No crop(s) added. ----- 1 fish(s) added. ----- You don't have any crop(s). You have 1 fish(s): Katla -----</pre>

Task 3

Using the **TaxiLagbe** app, users can share a single taxi with multiple people.

Implement the design of the **TaxiLagbe** class with the necessary properties so that the given output is produced for the provided driver code:

[Hint: 1. Each taxi can carry a maximum of 4 passengers

2. The addPassenger() method takes the last name of the passenger and ticket fare for that person in an underscore (_)-separated string.]

Driver Code	Output
<pre># Write your code here taxi1 = TaxiLagbe('1010-01', 'Dhaka') print('-----') taxi1.addPassenger('Walker_100', 'Wood_200', 'Matt_100') taxi1.addPassenger('Wilson_105') print('-----') taxi1.printDetails() print('-----') taxi1.addPassenger('Karen_200') print('-----') taxi1.printDetails() print('-----') taxi2 = TaxiLagbe('1010-02', 'Khulna') taxi2.addPassenger('Ronald_115', 'Parker_215') print('-----') taxi2.printDetails()</pre>	<pre>----- Dear Walker! Welcome to TaxiLagbe. Dear Wood! Welcome to TaxiLagbe. Dear Matt! Welcome to TaxiLagbe. Dear Wilson! Welcome to TaxiLagbe. ----- Trip info for Taxi number: 1010-01 This taxi can only cover the Dhaka area. Total passengers: 4 Passenger lists: Walker, Wood, Matt, Wilson Total collected fare: 505 Taka ----- Taxi Full! No more passengers can be added. ----- Trip info for Taxi number: 1010-01 This taxi can only cover the Dhaka area. Total passengers: 4 Passenger lists: Walker, Wood, Matt, Wilson Total collected fare: 505 Taka ----- Dear Ronald! Welcome to TaxiLagbe. Dear Parker! Welcome to TaxiLagbe. ----- Trip info for Taxi number: 1010-02 This taxi can only cover the Khulna area. Total passengers: 2 Passenger lists: Ronald, Parker Total collected fare: 330 Taka</pre>

Task 4

Design the **Sphere** class such that the following output is produced. **Hints:**

- Volume of the sphere = $\frac{4}{3} * \pi * r^3$, where r = radius of the sphere and $\pi = 3.1416$.
- Merging spheres together conserves the total volume. The volume of the bigger sphere can be calculated by adding the volume of the spheres being merged. [see pictures for details]. Pay attention to how the object is updated.
- When spheres of different colors are merged together then the merged sphere will have '**Mixed Color**' instead of one particular color.
- Your code should work for any number of Sphere objects passed to the **merge_sphere()** method.
- The default value of the radius r is 1.

#Write your code here

```
sphere1 = Sphere("Sphere 1")
print("1*****")
sphere1.printDetails()
print("2*****")
sphere2 = Sphere("Sphere 2", 3)
print("3*****")
sphere2.printDetails()
print("4*****")
sphere3 = Sphere("Sphere 3", 2)
print("5*****")
sphere3.printDetails()
print("6*****")
sphere3.merge_sphere(sphere1,sphere2)
print("7*****")
sphere3.printDetails()
print("8*****")
sphere4 = Sphere("Sphere 4", 5, "Purple")
print("9*****")
sphere4.merge_sphere(sphere3)
```

Output:

```
1*****
Sphere ID: Sphere 1
Color: White
Volume: 4.1888
2*****
3*****
Sphere ID: Sphere 2
Color: White
Volume: 113.09759999999999
4*****
5*****
Sphere ID: Sphere 3
Color: White
Volume: 33.5104
6*****
Spheres are being merged
7*****
Sphere ID: Sphere 3
Color: White
Volume: 150.7968
```

<pre>print("10*****") sphere4.printDetails()</pre>	<pre>8***** 9***** Spheres are being merged 10***** Sphere ID: Sphere 4 Color: Mixed Color Volume: 674.3967999999999</pre>
--	--

Task 5

1	<code>class ABC:</code>
2	<code>def __init__(self):</code>
3	<code>self.x = 3</code>
4	<code>self.y = 7</code>
5	<code>self.sum = 0</code>
6	<code>def methodA(self, x):</code>
7	<code>self.y = x + self.sum + self.x</code>
8	<code>self.sum = x + self.y</code>
9	<code>z = ABC()</code>
10	<code>z.sum = self.sum + self.y</code>
11	<code>self.methodB(z)</code>
12	<code>print(self.x, self.y, self.sum)</code>
13	<code>def methodB(self, a):</code>
14	<code>y = 3</code>
15	<code>a.x = self.x + self.sum</code>
16	<code>self.sum = a.x + a.y + y</code>
17	<code>print(a.x, a.y, a.sum)</code>

Write the output of the following code:

```
a = ABC()
a.methodA(5)
```
